DETAILED ACTION

Election/Restriction

Application's election without traverse of embodiment 8 (Claims 17-18), shown in Figures 38-43 is acknowledged for prosecution in the subject application. Accordingly, claims 1-16 and 19-20 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Applicants have the right to file a divisional application covering the subject matter of the non-elected claims.

Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 17 is rejected under 35 U. S. C. § 102 (a) as being anticipated by
Background of the Invention.

Regarding to claim 17, Background of the Invention discloses a semiconductor device fabrication method comprising forming a first insulating film 1301 on a surface of a semiconductor substrate 1300 having a trench in a surface portion, thereby covering inner walls of the trench with the first insulating film 1301/1304; selectively forming a

second insulating film 1305 on the first insulating film in the trench; and selectively forming a third insulating film 1306b on the first and second insulating films in the trench (Spec.: pages 3-4, figs. 51-54).

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 18 is rejected under 35 U.S.C. 103 (a) as being unpatentable over
Background of the Invention in view of the remark.

Regarding to this claim, Background of the Invention discloses the claimed invention except for the method further comprising annealing the semiconductor substrate in a water-containing ambient at a temperature of 200°C to 600°C for a predetermined time, after the second insulating film is formed, and holding the semiconductor substrate at a temperature of 450°C to 1,000°C for a predetermined time.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to anneal the semiconductor substrate in a water-containing ambient at a temperature of 200°C to 600°C for a predetermined time, after the second insulating

film is formed, and to hold the semiconductor substrate at a temperature of 450°C to 1,000°C for a predetermined time, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.
